I am able to generate the pdf using the Command Line wkhtmltopdf but when i use it in python lib

```
from wkhtmltopdf import WKhtmlToPdf

wkhtmltopdf = WKhtmlToPdf(
    url='http://www.wikipedia.org',
    output_file='a.pdf',
)
```

i get

```
'Exception: Missing url and output file arguments'
```

python   wkhtmltopdf

Your code seems quite different from the example included in the github repo. – RanRag Aug 30 '12 at 10:24

I Used the Example from pypi.python.org/... – user1635596 Aug 30 '12 at 10:45

I think there is an issue with the current version. I had the same issues, and if you look at their Github issues page, someone posted the same issue two days ago.

This should have worked also, according to their documentation:

```
python -m wkhtmltopdf.main google.com ~/google.pdf
```

But instead I get:

```
optparse.OptionConflictError: option -h/--header-html: conflicting option string(s): -h
```

Since it's a wrapper, I'm guessing the underlying application was updated, but the wrapper has not been.

Calling the class like this seems to get past the error, but other errors reveal themselves: "wkhtmltopdf = WKhtmlToPdf('wikipedia.org','a.pdf',)"; – Joe J Jan 21 '13 at 20:25 ✎

```
from wkhtmltopdf import WKhtmlToPdf

wkhtmltopdf = WKhtmlToPdf(*
    [url='http://www.wikipedia.org',
    output_file='a.pdf']
)
```

The problem in typos and rewrited API in wkhtmltopdf/main.py

Right now API is:

```
from wkhtmltopdf import WKhtmlToPdf

wkhtmltopdf = WKhtmlToPdf('http://www.wikipedia.org','out.pdf')
```
